# Identifying pain points with usability Heuristic Evaluation

1

## No Consistency in contextual actions

Some of the actions related to AIO are on the tiles where as the others are at the header level.

Team and Members are actions that are dependent. User has to travel back and forth and is forced to remember or recall team assignment for eachg member.

2

## No help or documentation on forms

The labels are vague in forms causing user to think about what should be entered.

Some of the forms are very long and are not categorized in any order to let the user know the bare minimum information that is required to complete an action.

3

## Not aesthetic and minimalist design

Too many colors

Repitition of words causing clutter

# Design Options
